Notes: Each column is one fitted regression of the post-minus-pre information measure on Big4 and the indicated controls. The comparison group is non-Big4. Forecasts refer to the same next fiscal year, paired by brokerage. The 180-day window includes days -180 to -1 and +1 to +180; day zero is excluded. Rank models transform the outcome and continuous controls to industry-year percentile ranks before restricting to complete controls. Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
