*Notes:* Each column is a separate outcome/specification regression. Sample: full market. Scale: raw. Three controls are absolute earnings surprise, market-to-book, and paired forecast count; four controls add log market capitalization. Common, no X uses the complete-control sample without controls. Original samples, rank definitions and firm clustering are retained.
Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
