Same-firm rotation 2SLS: successor year + 0

Treatment / excluded IV	Outcome	2SLS coefficient (SE)	First-stage F / N
Successor from release pool / z_other_release_slots	Any failure	-0.017 (0.146)	F=10.47; N=1,424
Successor from release pool / z_other_release_slots	Restatement	0.112 (0.118)	F=10.47; N=1,424
Successor from release pool / z_other_release_slots	Violation	-0.106 (0.131)	F=10.47; N=1,424
Successor Big 4 background / z_big4_release_rate	Any failure	-3.688 (6.066)	F=0.473; N=1,424
Successor Big 4 background / z_big4_release_rate	Restatement	-3.670 (5.906)	F=0.473; N=1,424
Successor Big 4 background / z_big4_release_rate	Violation	-1.984 (3.432)	F=0.473; N=1,424
Successor zero prior failure / z_workload_zero_fail	Any failure	-0.459 (0.516)	F=6.196; N=956
Successor zero prior failure / z_workload_zero_fail	Restatement	-0.342 (0.323)	F=6.196; N=956
Successor zero prior failure / z_workload_zero_fail	Violation	-0.364 (0.440)	F=6.196; N=956
Successor zero prior restatement / z_workload_zero_rest	Any failure	-53.101 (3,357.051)	F=0.000250; N=962
Successor zero prior restatement / z_workload_zero_rest	Restatement	-50.564 (3,199.426)	F=0.000250; N=962
Successor zero prior restatement / z_workload_zero_rest	Violation	-28.287 (1,786.726)	F=0.000250; N=962
Successor zero prior violation / z_workload_zero_viol	Any failure	-0.265 (0.428)	F=5.532; N=956
Successor zero prior violation / z_workload_zero_viol	Restatement	-0.300 (0.249)	F=5.532; N=956
Successor zero prior violation / z_workload_zero_viol	Violation	-0.163 (0.381)	F=5.532; N=956

Notes: Each treatment has three outcome rows. Standard errors cluster by audit firm. F is the excluded-instrument test from the identical second-stage sample. Audit-firm and rotation-year fixed effects and design-specific pre-assignment controls are included. Weak instruments make conventional 2SLS inference unreliable.
