Same-firm rotation 2SLS: successor year + 1

Treatment / excluded IV	Outcome	2SLS coefficient (SE)	First-stage F / N
Successor from release pool / z_other_release_slots	Any failure	0.142 (0.192)	F=7.230; N=1,212
Successor from release pool / z_other_release_slots	Restatement	0.025 (0.084)	F=7.230; N=1,212
Successor from release pool / z_other_release_slots	Violation	-0.115 (0.192)	F=7.230; N=1,212
Successor Big 4 background / z_big4_release_rate	Any failure	-0.957 (2.681)	F=0.680; N=1,212
Successor Big 4 background / z_big4_release_rate	Restatement	-2.562 (3.764)	F=0.680; N=1,212
Successor Big 4 background / z_big4_release_rate	Violation	0.522 (2.196)	F=0.680; N=1,212
Successor zero prior failure / z_workload_zero_fail	Any failure	0.095 (0.315)	F=6.300; N=784
Successor zero prior failure / z_workload_zero_fail	Restatement	-0.265 (0.275)	F=6.300; N=784
Successor zero prior failure / z_workload_zero_fail	Violation	0.042 (0.298)	F=6.300; N=784
Successor zero prior restatement / z_workload_zero_rest	Any failure	-1.903 (11.310)	F=0.0307; N=790
Successor zero prior restatement / z_workload_zero_rest	Restatement	-3.230 (18.288)	F=0.0307; N=790
Successor zero prior restatement / z_workload_zero_rest	Violation	-1.847 (11.174)	F=0.0307; N=790
Successor zero prior violation / z_workload_zero_viol	Any failure	0.114 (0.246)	F=6.371; N=784
Successor zero prior violation / z_workload_zero_viol	Restatement	-0.186 (0.199)	F=6.371; N=784
Successor zero prior violation / z_workload_zero_viol	Violation	0.072 (0.231)	F=6.371; N=784

Notes: Each treatment has three outcome rows. Standard errors cluster by audit firm. F is the excluded-instrument test from the identical second-stage sample. Audit-firm and rotation-year fixed effects and design-specific pre-assignment controls are included. Weak instruments make conventional 2SLS inference unreliable.
