Same-firm rotation 2SLS: successor year + 2

Treatment / excluded IV	Outcome	2SLS coefficient (SE)	First-stage F / N
Successor from release pool / z_other_release_slots	Any failure	-0.319 (0.330)	F=4.469; N=1,032
Successor from release pool / z_other_release_slots	Restatement	-0.300 (0.249)	F=4.469; N=1,032
Successor from release pool / z_other_release_slots	Violation	-0.241 (0.288)	F=4.469; N=1,032
Successor Big 4 background / z_big4_release_rate	Any failure	1.149 (1.901)	F=2.962; N=1,032
Successor Big 4 background / z_big4_release_rate	Restatement	-0.155 (1.287)	F=2.962; N=1,032
Successor Big 4 background / z_big4_release_rate	Violation	0.902 (1.546)	F=2.962; N=1,032
Successor zero prior failure / z_workload_zero_fail	Any failure	-0.355 (0.358)	F=4.899; N=647
Successor zero prior failure / z_workload_zero_fail	Restatement	-0.528 (0.427)	F=4.899; N=647
Successor zero prior failure / z_workload_zero_fail	Violation	-0.216 (0.309)	F=4.899; N=647
Successor zero prior restatement / z_workload_zero_rest	Any failure	-1.280 (9.474)	F=0.0289; N=653
Successor zero prior restatement / z_workload_zero_rest	Restatement	-2.934 (18.150)	F=0.0289; N=653
Successor zero prior restatement / z_workload_zero_rest	Violation	0.100 (2.802)	F=0.0289; N=653
Successor zero prior violation / z_workload_zero_viol	Any failure	-0.350 (0.332)	F=2.536; N=647
Successor zero prior violation / z_workload_zero_viol	Restatement	-0.352 (0.401)	F=2.536; N=647
Successor zero prior violation / z_workload_zero_viol	Violation	-0.327 (0.277)	F=2.536; N=647

Notes: Each treatment has three outcome rows. Standard errors cluster by audit firm. F is the excluded-instrument test from the identical second-stage sample. Audit-firm and rotation-year fixed effects and design-specific pre-assignment controls are included. Weak instruments make conventional 2SLS inference unreliable.
