Notes: All specifications use the common sample and client controls plus historical exposure controls. Separate regressions include one background indicator; joint regressions include all six indicators. Education and school thresholds are nested: joint coefficients are incremental contrasts. Category rows use mutually exclusive groups and the reference group stated in the row. Column 3 includes year, client and audit firm fixed effects. Standard errors are clustered by client. Education is measured from the available snapshot; Big Four history excludes the focal client. Outcomes use a three-year disclosure window. *** p<0.01, ** p<0.05, * p<0.1.
