Notes: Outcomes are unwarned joint events. New entry requires three consecutive pre-entry non-Big-4 years, but no future retention. Later exits are retained. Original always-non-Big-4 controls and baseline-year availability are retained. Nine controls and missing indicators; cohort × firm and cohort × industry × year FE; firm-clustered SE. Notes: Each matched sample. Risk matching adds pre-entry financial paths and announcement histories to the baseline Logit. History means use covered years only, with coverage counts and missing indicators. Same-year nearest-neighbor matching with replacement, without a caliper. Outcomes are unwarned joint events. Nine controls; cohort × firm and cohort × industry × year FE; firm-clustered SE. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
