Threshold Event Study: Selected Dynamic Contrasts

	(1)	(2)
Fiscal years	2001–2024	2001–2011
Big4 - non-Big4, day +0	0.002092*	0.004839**
	(0.001180)	(0.001916)
p	0.0763	0.0116
Big4 - non-Big4, day +1	0.001809	0.005246**
	(0.001593)	(0.002584)
p	0.2560	0.0424
Big4 - non-Big4, day +5	0.001776	0.008210*
	(0.002374)	(0.004274)
p	0.4544	0.0548
Good-news threshold	10 percent	10 percent
Firm-by-year FE	Yes	Yes
Event / trading-date FE	Yes	Yes

Notes: One pooled threshold-path regression per column; event days are coefficient rows, not independent regressions. Day -1 is the base. The original restricted interaction structure is retained. Standard errors are clustered by firm-fiscal-year. Sample counts are not reconstructed from the selected coefficient excerpt.
Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
