p	0.3874	0.2845
Outcome	CAR, percentage points	CAR, percentage points
Observations	330,646	330,646
Event clusters	30,064	30,064
R-squared	0.6860	0.6888

Notes: Each column is one joint three-group dynamic model. Both group contrasts and all selected event days come from that same fitted model. Blank spline slope cells were not reported in the source excerpt. Firm-fiscal-year, event-time and trading-date FE are retained; clustering is by firm-fiscal-year.
Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
