Pre-Announcement Joint Tests: From 2012

Fitted model	(1) Big4 only	(2) Local 8 only	(3) Other only	(4) Joint interaction
Within-group joint p	0.8722	0.6481	0.5220	–
Big4 - Other joint p	–	–	–	0.9497
Local 8 - Other joint p	–	–	–	0.4395
Big4 - Local 8 joint p	–	–	–	0.2517
Daily observations	22,226	102,219	49,367	174,041
Event clusters	2,025	9,296	4,497	15,825

Notes: One saved regression per column. The tests jointly set the day -5, -4, -3 and -2 coefficients to zero, relative to day -1. The three pooled contrast tests share column (4). These are p-values, not coefficients; no significance stars are added. Original firm-fiscal-year clustering is retained.
Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
