Long-Window Cumulative Market-Adjusted Returns

Model	(1) Good news only	(2) Good minus neutral
Cumulative contrast, day +0	-0.000473	0.000447
	(0.001505)	(0.001517)
p	0.7535	0.7680
Cumulative contrast, day +1	-0.001725	-0.000368
	(0.002073)	(0.002079)
p	0.4053	0.8596
Cumulative contrast, day +5	-0.002904	-0.000513
	(0.003004)	(0.002994)
p	0.3339	0.8640
Cumulative contrast, day +20	-0.000590	0.002669
	(0.004474)	(0.004404)
p	0.8951	0.5446
Cumulative contrast, day +40	-0.018105***	-0.014602***
	(0.005528)	(0.005483)
p	0.0011	0.0078
Cumulative contrast, day +60	-0.020135***	-0.020332***
	(0.007340)	(0.007205)
p	0.0061	0.0048
Daily observations	252,270	988,260
Firm-by-year FE	Yes	Yes
Event / trading-date FE	Yes	Yes
Additional controls	No	No

Notes: Each column is one dynamic model, with selected event days in rows. Column (1) compares Big4 and non-Big4 within good news. Column (2) contrasts their good-minus-neutral responses using the original restricted interaction. The base is day -1 and cumulative returns include announcement-day returns. Original return units and firm clustering are retained. Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
