Branch Entry Reduced Forms: Through 2012

	(1)	(2)	(3)	(4)	(5)	(6)
Dependent variable	Any failure	Fin restatement	Violation	Any failure	Fin restatement	Violation
Shock coverage	Province	Province	Province	Province + neighbors	Province + neighbors	Province + neighbors
Post-entry average, years 0–5	1.021560*	0.511554	0.407594	2.703731**	1.598014**	0.728808
	(0.585419)	(0.468801)	(0.515411)	(1.112438)	(0.694643)	(0.995207)
p	0.0916	0.2842	0.4355	0.0226	0.0300	0.4708
Firms	1,441	1,441	1,441	782	782	782
Two-period pairs	24,361	24,361	24,361	9,632	9,632	9,632
Clusters	30	30	30	26	26	26
Largest client	Excluded	Excluded	Excluded	Excluded	Excluded	Excluded

Notes: Each outcome and spatial-design column is a distinct reduced-form estimate using the existing cohort aggregation. All outcomes are failure indicators interacted with non-MAO. Estimates and standard errors are in percentage points. The original province-cluster (cluster_id=2) output is used. Two-period pair counts are not unique company-year counts. These are not city-level second-stage results.
Standard errors are in parentheses. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
