Firm / fiscal-year FE	Yes	Yes	Yes	Yes	Yes	Yes
Size, MB, 1/N main effects	Yes	Yes	Yes	Yes	Yes	Yes
Big4 main effect	Yes	Yes	Yes	Yes	Yes	Yes
Clustering	Firm	Firm	Firm	Firm	Firm	Firm

Notes: Frozen estimates, November 1, 2026. FY 2001–2024. UE equals actual EPS minus strict pre-announcement 180-day median forecast, divided by pre-announcement price. Controls: log market capitalization, MB and inverse analyst coverage, centered at the estimation-sample means. Columns 4–6 add all three controls interacted with UE. Each column is one regression; Big4 ERC is the sum of UE and Big4-by-UE coefficients, evaluated at mean controls. Firm-clustered standard errors in parentheses. * p<0.10, ** p<0.05, *** p<0.01. No winsorization; historical restructuring exclusions retained. Company-pool selection uses full-period characteristics; annual auditor status determines Big4. Each eligible announcement receives unit weight.
