Audit Fee Premium: Breaks in 2008 and 2012

	(1)	(2)
Dependent variable	$\ln(1 + \text{Domestic audit fee})$	
Break specification	2012 only	2008 and 2012
Big4	0.667***	0.906***
	(0.053)	(0.122)
Big4 $\times (t - 2012)$	0.057***	0.087***
	(0.008)	(0.015)
Big4 $\times$ Post$_{2008}$	—	0.001
		(0.055)
Big4 $\times (t - 2008) \times$ Post$_{2008}$	—	-0.101***
		(0.025)
Big4 $\times$ Post$_{2012}$	-0.189***	-0.024
	(0.037)	(0.035)
Big4 $\times (t - 2012) \times$ Post$_{2012}$	-0.081***	-0.010
	(0.009)	(0.017)
Firm fixed effects	Yes	Yes
Year fixed effects	Yes	Yes
Size, leverage, loss, ROA	Yes	Yes
Original missing indicators	Yes	Yes
Observations	62,764	62,764
Firms / firm clusters	5,559	5,559
Within R^2	0.2849	0.2854
2012 level + slope joint test: p	< 0.0001	0.7728
2008 level + slope joint test: p	—	0.0001

Notes: Fiscal years 2000–2024; domestic audit fees in CNY. Each column is one regression with firm and year fixed effects. Firm-clustered standard errors are in parentheses. Post indicators include the named year. Four controls and their original missing indicators are supplied; the four indicators coincide, so one is retained and three are omitted for collinearity. In column (2), the Big4 main term is the pre-2008 trend extrapolated to 2012, not the total premium in 2012. Joint tests are firm-clustered Wald tests of the level and slope changes. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
