Company FE	Yes	Yes	Yes	Yes	Yes	Yes
Fiscal-year FE	Yes	Yes	Yes	Yes	Yes	Yes
Company-clustered SE	Yes	Yes	Yes	Yes	Yes	Yes

Each column is one regression. All six columns use the same sample within the period. Parentheses contain company-clustered standard errors. MV is market capitalization, MB is market-to-book, and N is strict-180-day analyst coverage; superscript c denotes mean centering. Control main effects use six decimals to show small coefficients; other coefficients use three. Equal ERC tests $H_0 : \beta = \beta + \theta$, equivalently $\theta = 0$, where $\beta = b_{UE}$ and $\theta = b_{UE \times Big4}$. Its p-value is the frozen two-sided test of the interaction coefficient. It does not compare the two specifications. Strict pre-announcement forecasts; original EPS restoration and tails; no matching, size cutoff, ever-Big4 restriction, restructuring exclusion, or winsorization. Stars use unrounded p-values: *** p<0.01, ** p<0.05, * p<0.10. Frozen estimates: November 3, 2026.
