Company FE	Yes	Yes	Yes	Yes	Yes	Yes
Fiscal-year FE	Yes	Yes	Yes	Yes	Yes	Yes
Company-clustered SE	Yes	Yes	Yes	Yes	Yes	Yes

Each column is one regression. All six columns use the same matched-company sample. Parentheses contain company-clustered standard errors. MV is market capitalization, MB is market-to-book, and N is strict-180-day analyst coverage; superscript c denotes mean centering. Coefficients, standard errors, and reported p-values use three decimals. Equal ERC tests $H_0 : \beta = \beta + \theta$, equivalently $\theta = 0$, where $\beta = b_{UE}$ and $\theta = b_{UE \times Big4}$. Its p-value is the frozen two-sided test of the interaction coefficient. It does not compare the two specifications. Strict pre-announcement forecasts; original EPS restoration and tails; historical restructuring exclusions retained; no winsorization. Company matching uses full-period characteristics; annual auditor status defines Big4. Each eligible announcement has unit weight. Stars use unrounded p-values: *** p<0.01, ** p<0.05, * p<0.10. Frozen estimates: November 1, 2026.
