Observations	8,575	8,575	12,803	12,803	9,735	9,735
Firms / clusters	2,670	2,670	3,590	3,590	2,996	2,996

Notes: Nonfinancial firms, fiscal years 2013–2023. Outcome: 100 times the change from the latest pre-announcement quarter-end to fiscal year $t+h$ end. M1: change on ES and fiscal-year FE; M2 adds Big4 and ES × Big4. ES is scaled per 10 pp. The signal slope is pooled in M1 and non-Big4 in M2. Total Big4 slopes are linear combinations. Parentheses: firm-clustered SE. No financial controls or winsorization. Stars use stored unrounded p-values: * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
